

ViziBook.iba is the fully interactive version to be used with iPad. I believe you'll have to iBook Author on your Mac and install the iBook app on you iPad. Then you can open ViziBook.iba within iBook Author and click on the "Preview" icon up on top. DO NOT CLICK ON "PUBLISH"!!!!!! I believe Preview should transfer the file onto your iPad.

From the iPad (or from the ViziBook.iba when open in iBook Author) you should be able to click on the hyperlinks to take you to websites for data files and software. The data files are at the site: "<https://sites.google.com/lmsa.edu/introviz/>"

ViziBook.pdf is not an interactive version, however all of the individual Galleries are provided in pdf format so that the reader can view the step by step instructions that each Gallery demonstrates. Unfortunately the Review interactives could not be easily reconstructed as individual pdf.
